DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(g)(1) during the course of an interference conducted under section 135 or section 291, another inventor involved therein establishes, to the extent permitted in section 104, that before such person's invention thereof the invention was made by such other inventor and not abandoned, suppressed, or concealed, or (2) before such person's invention thereof, the invention was made in this country by another inventor who had not abandoned, suppressed, or concealed it. In determining priority of invention under this subsection, there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.

2. Claims 19-25, 30-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Felton et al. (USPN 6207874).

With regards to claims 19 and 30-31, Felton teaches of custom permanent (column 2, line 20 & column 2, lines 57-67) tattoos that incorporates computer image processing (column 4, lines 47-56) to match the skin tone. Column 4, line 60).

With regards to claim 20, photograph is RGB image.

With regards to claim 21, camera flash is white light.

With regards to claims 22-25, 31-32, and 34; Felton et al. teaches of recording skin tone for construction of tattoo.

With regards to claim 33, Felton et al. teaches of photographs. It is well known in the art that camera flashes use multiple LEDs for white light generation.

Art Unit: 3737

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Felton et al. (USPN 6207874) in view of Pruche et al. (US PG PUB 2003/0065523).

Felton teaches of custom permanent (column 2, line 20 & column 2, lines 57-67) tattoos that incorporates computer image processing (column 4, lines 47-56) to match the skin tone. Column 4, line 60). Felton et al. does not teach of pH tracking or a display screen.

Pruche et al. teaches of skin tone and pH monitoring (§ 38) for make-up tracking (§ 30) in human subjects. Pruche et al. teaches of using a camera (§ 40).

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains to combine the Felton et al. custom tattooing with the Pruche pH tracking in order to extract information pertinent to skin health.

Allowable Subject Matter

5. Claims 27-29 and 35-36 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
